

Are your customers satisfied with Wolf Trax Micronutrients?

Having a little bit of iron on each pellet has helped our turf customers. They have seen generally quick green-up of lawns. Before, if an iron granular ended up on a sidewalk and it wasn't blown off before the sprinklers went on, the iron would leave a little brown stain spot on the sidewalk. It didn't make our customers' clients very happy. They don't have that problem with the Wolf Trax® Iron DDP.

“ The Wolf Trax coats the fertilizer granules really well, you can see it. ”

Why do you feel confident recommending Wolf Trax to your customers?

It's all about blend consistency. We show our customers two jars. The one with granular has just one pellet here and there. With Wolf Trax, the entire batch is tinted red. The Wolf Trax coats the fertilizer granules really well, no doubt about it, you can see it.

What storage benefits have you realized with Wolf Trax?

Inventory-wise, we take one pallet at the beginning of the spring. We used to bring in 20 pallets of granular product at the beginning of the year. The Wolf Trax products are packaged real well in clean boxes that seem bullet-proof almost. We've never had leaking problems.

How is Wolf Trax better for the environment?

We aren't throwing away 50 empty bags every day, and I tell my customers that there are lower levels of un-safe heavy metals.
