

Apples & Wolf Trax DDP Micronutrients

Loose Cluster	Pink	Full Bloom	Petal Fall	½ inch Fruitlet	1 inch Fruitlet	2 inch Fruitlet	Pre Harvest	Post Harvest
Wolf Trax™ Boron DDP™ (18.5%) - Apply Boron only if soil analysis indicates a deficiency - Beware of Boron toxicity, since it is readily taken up by both the fruit and trees - Boron is important for flowering and fruit set, both this season and next year's buds - Apply only when the leaves are green and actively growing								
# 1	# 2							# 3
Wolf Trax Calcium DDP (27%) - Wolf Trax Calcium DDP is the only product on the market that offers Dual Action™, giving both immediate plant uptake (within 48 hours) as well as continuous feeding over time. - Calcium increase fruit quality and storagability - Do not use on Golden Delicious during slow drying conditions								
				4 - 6 Sprays				
Wolf Trax Copper DDP (57.5%) - Copper deficiency is quite common in most apple producing areas - Can also be applied as a cover spray early in spring								
Wolf Trax Zinc DDP (62%) (*requires a surfactant) - Zinc is poorly absorbed, and difficult to get into the tree - Zinc increases winter hardiness, bud strength, return bloom, fruit size and density								
# 1	# 2							# 3
OPTIONAL PROGRAM								
Wolf Trax Iron DDP (47%) - Iron may be added to apples if tissue analysis shows a deficiency								
			# 1					# 2
