

# Wolf Trax Copper DDP Micronutrients – Seed Treatment for Small Grains (wheat, barley, oats)

Micronutrients play a vital role in a healthy plant's development. Wolf Trax® DDP® Seed Treatments will ensure your seed gets off to a healthy start – making sure it reaches its true genetic potential.

**Available.** Uptake of Wolf Trax DDP Micronutrients is virtually assured due to its close proximity to the seed. The unique Dual Action™ formulation means that Wolf Trax DDP Micronutrients are in a form that is plant-available as soon as the seed begins to germinate, and remains plant-available. The following trial data shows that Copper DDP Seed Treatment resulted in plant uptake of copper at both 7 and 14 days after emergence.

**Safe.** Research shows that Wolf Trax DDP Micronutrients have no adverse effect on germination, and are safe on the seed.

**Flexible and Convenient.** With DDP (Dry Dispersible Powder) Micronutrients you have flexibility in application method, applying before or after other seed treatment products in a dry form, or slurried, depending on the system that works best for you.

**Rate.** Wolf Trax Copper DDP Seed Treatment should be applied at 6 oz per 100 lbs of seed.
