

Liquid Fertilizer & Wolf Trax DDP Micronutrients

Wolf Trax DDP Micronutrients - Innovative New Technology:

Powder is designed to easily mix with all liquid fertilizers

Once the DDP Micronutrient is mixed it stays in suspension without any additional agitation

Will not leach in the soil making it a more environmentally friendly choice

Why Wolf Trax® DDP Micronutrients?

Innovation - Ground-breaking technology, exclusive to Wolf Trax, provides superior application and uptake of micronutrients.

Superior Application - The unique DDP® (Dry Dispersible Powder) Formulations mix more easily and more quickly, leading to fewer application problems, and improved effectiveness in solving nutrient deficiencies.

Improved Uptake - Wolf Trax products are the only micronutrients offering exclusive Dual Action™ availability, providing both immediate uptake and continuous feeding over time.

Flexible and Convenient - Wolf Trax DDP Technology greatly reduces the volume of product and amount of handling required, with greater storage convenience.

Label Use Rates for Wolf Trax DDP Micronutrients and Liquid Fertilizer

Use the following amount of DDP Micronutrient for every 1 kg/ha of nutrient your soil test calls for:

Product	Rate
Wolf Trax Boron DDP	0.67 kg
Wolf Trax Calcium DDP	0.46 kg
Wolf Trax Copper DDP	0.22 kg
Wolf Trax Iron DDP	0.27 kg
Wolf Trax Manganese DDP	0.38 kg
Wolf Trax Zinc DDP*	0.20 kg

* When mixing zinc with liquid phosphate fertilizer a surfactant is required. Contact Wolf Trax at 204-237-9653 for more information.

For more information on the complete line of innovative Wolf Trax products contact your local retailer, or call 204-237-9653

For more precise rate recommendations for your specific area, please refer to soil tests, tissues tests or advice from a local agronomist. Not all products are registered for all uses in all markets. For more information, contact infomaster@wolftrax.com.
