

Flax & Wolf Trax DDP Micronutrients

Key Micronutrient That May Be Deficient:
Zinc

Factors Affecting Availability:
Crop removal

High pH

High phosphate levels (zinc and phosphate will tie each other up when placed in close proximity)

Micronutrients Roles and Benefits:

Essential for sugar regulation and enzymes in the plant that control growth

Helps intensify flowering and evens maturity

Why Wolf Trax® DDP Products?

Innovation - Ground-breaking foliar technology, exclusive to Wolf Trax, provides superior application and uptake of micronutrients.

Superior Application - The unique DDP® (Dry Dispersible Powder) formulations mix more easily and more quickly, leading to fewer application problems, and improved effectiveness in solving nutrient deficiencies.

Improved Uptake - Wolf Trax products are the only micronutrients offering exclusive Dual Action™ activity, providing both immediate uptake and continuous feeding over time.

Flexible and Convenient - Wolf Trax DDP technology greatly reduces the volume of product and amount of handling required, with greater storage convenience.

Zinc provides more uniform maturity while increasing yield potential.

Foliar Label Use Rates for Wolf Trax Zinc DDP (62%)*

Crop	Rate	Timing
Flax	6.5 oz/acre (450 grams/ha)	Apply within 30 days of seeding for best results.

* When using Zinc as a foliar, a surfactant is required
