Foliar Applications of Wolf Trax DDP Micronutrients

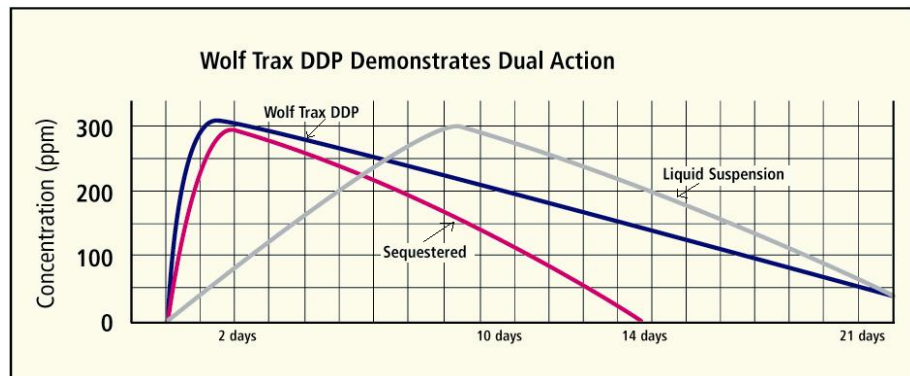

Benefits of Wolf Trax DDP® Micronutrients:

- Lower storage and handling costs
- Designed to disperse instantly in water
- High quality products; low heavy metals
- Safer for you to handle
- Safe on crops
- Dual Action™ availability

Are you concerned that your customers may have missed the boat on micronutrient fertility due to a rushed spring season? They still have many options with Wolf Trax® DDP Micronutrients as a foliar.

Dual Action allows flexibility of application

There are many foliar micronutrients on the market today, but only Wolf Trax offers you Dual Action availability.

The DDP Dual Action formulation allows your customers more flexibility in timing of application. When applied as a foliar application, one portion of the DDP Micronutrient becomes immediately available (within 48 hours) – similar to a sequestered, or chelated product. Another portion releases more slowly (similar to a suspension product), providing the plant with extended feeding. What does this mean for your customers?

- More flexibility in timing of application. Growers can spray micronutrients when it's most convenient to spray other crop protection products, and still be assured that the micronutrient will feed the crop.

(continued)

- You don't have to accurately predict the weather. Under favorable growing conditions, the crop will benefit from the early availability of the micronutrient. Under cooler, slower growing conditions, plants will benefit from nutrition delivered later.

Tools to help you in Growing Forward with Wolf Trax

Wolf Trax has extensive information and tools to help you deliver all the benefits of DDP Micronutrients to your customers interested in a Foliar Application. In addition to label recommendations, here's a list of some of the information at your disposal:

Fact Sheets (available at www.wolftrax.com)

- Product application tips
- Early season nutrition possible with Wolf Trax DDP Micronutrient technology
- Research Update: Manganese and glyphosate resistant soybeans
- Use Guidelines for Wolf Trax Manganese DDP and glyphosate
- Wolf Trax DDP Micronutrients safe on high value orchard crops
- Wolf Trax Calcium DDP: An effective way to deliver calcium to fruit
- Turf Grass Production: An overview of the benefits of using Wolf Trax DDP micronutrients as a foliar application

Also available are foliar application grower brochures, mixing guidelines, and practical recommendations before using DDP as a foliar application. Speak to your Wolf Trax representative, or call our Technical and Customer Service representative at 204-237-9653.

You and Wolf Trax....**Growing Forward**® together.
