

## Wolf Trax Innovative Micronutrients...

A better way to spray your crop

wolftrax  
INNOVATIVE MICRONUTRIENTS

Ensure your crops are well nourished, and watch your crops perform to their true potential, with Dual Action™ Availability, exclusively from Wolf Trax DDP™ Micronutrients.

FOLIAR APPLICATION

## DDP Foliar Micronutrients

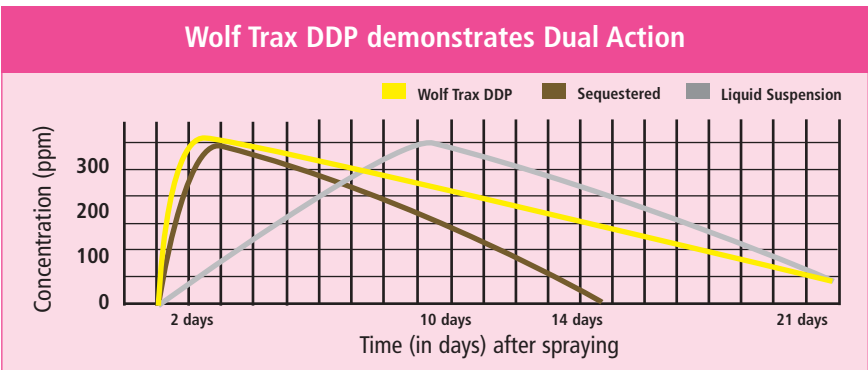

---

- Custom-designed to provide immediate uptake and continuous feeding
- Delivers benefits of chelates without leaf-burn problems
- Safe on crops
- Flexibility in spray timing and tank-mixes

## Dual Action Availability

---

The unique DDP Dual Action formulation provides both immediate uptake (within 48 hours), and continuous feeding over time (up to 28 days). This means your crop has access to micronutrients throughout the crop's critical growth stages, and you have greater flexibility in spray timing.

Thanks to Wolf Trax proprietary Dual Action formulation, you can apply when it's most convenient, without giving up plant availability.

## Superior application

---

Wolf Trax DDP (Dry Dispersible Powder) is designed to disperse almost instantly in water – less than 60 seconds for a 20-acre mix. And, DDP Micronutrients stay in suspension and will not clog up your application equipment.

## Custom-designed for crop safety

---

Wolf Trax DDP Micronutrients are formulated using only the highest quality source material and have very low heavy metal contents. These high-quality products are available to the plant when needed without risk of crop injury. And, DDP Micronutrients are safer for you to handle.

Wolf Trax Manganese DDP was applied at 2 times the recommended application rate at +100-degree (Fahrenheit) temperatures, without injury to the lemon leaves.

Source: University of Arizona

## Flexibility and convenience

---

You can tank-mix Wolf Trax Micronutrients with most pesticides for one-pass application efficiency. Plus, you can spray when you need to, thanks to Dual Action Availability. There's also less product to store, handle, mix and lift because Wolf Trax DDP is made up of high-analysis dry powders.

Wolf Trax Manganese DDP (right) shows the immediate availability of micronutrients in foliar-applied treatments. Untreated soybean check (left) suffers severe manganese deficiency.

## Peace of mind

---

All Wolf Trax DDP products come backed by the Growing Forward™ Guarantee. Ask your Wolf Trax dealer for details.
